

Mounting Drive via webdav on Linux

Problem

As a Linux user, I would like to mount the OX Drive folder (formally known as Infostore), but changes are not synchronized back to the Open-Xchange server.

Solution

1. Edit `/etc/davfs2/davfs2.conf` and insert the following:

```
use_locks 0
if_match_bug 1
debug http
```

2. `umount` and `mount` again:

```
mount -t davfs https://<myserver.com>/servlet/webdav.infostore /mnt
```
