

Disabling the "What's new" Dialog

Affected version(s): > 7.10.5

Symptom

With 7.10.5 a new greeting dialog was introduced to show the new main features of that version. It is shown for all users once but you want to disable it.

Solution

It is possible to disable the dialog for all users or finer grained with the config cascade. The used option is **io.ox/core/whatsNew/autoStart**.

To disable it for all users put the option into a configuration file, for example /opt/open-xchange/etc/settings/appsuite.properties

```
io.ox/core//whatsNew/autoStart=false
```

Note: the setting is case sensitive.

A **reloadconfiguration** or a restart of the open-xchange service activates the setting.
